THE HEALTHY IMMUNE SYSTEM

A germ, such as ________________, ________________, ________________, ________________ invades the body and quickly _________________.

The healthy __________________________ system fight back by sending ________________ to destroy the invaders.

First, the __________________________ surround and “eat” some of the invaders, then ________________ notify the __________________________ which in turn produce ________________ which destroy the germs.

Germs that survive the attack can cause ________________. In some cases, ________________ help to finally destroy the germs. ________________ health is restored.

Name_______________________________
